Programming in C

Practical Exercises

Files - 1

1) Your code must:
2) Read the two text files (test_read.txt and text_read2.txt)
3) Create a third text file (test_write2.txt)
4) Write in this third file the content of the first and the second files

Files - 2

1) Your code must:
2) Figure out what is written in the encrypted file (test_enc.txt)

Hint: To decrypt a character you must apply the operation `char_dec = char_enc - x`, where x is one number of the interval [1,100]
Extra: Use the same logic to encrypt files
